TECHNOLOGIES

KEY PROJECTS

Contact Manager App

Developed a ReactJS based contact manager web app in less than 2 weeks with no prior experience on the technology for one of the Internship applications. The app lists all the contacts from a predefined dataset and lets users carry out basic actions such as sorting, search, new contact creation, edit and delete.

Shopping To-do List

Developed an app in ReactJS to aid shoppers create a shopping list while they are physically in the store. This lets them add items to the list with the pricing and an optional image of the product. The app also allows for the items to be marked as completed/cancelled, which then creates an additional list of those items giving the users a choice to relook at them, if needed.

This was developed mainly as a web based mobile app to enable users interact with the list on the go.

Java Developer - Ideas2IT

- Designed and created a successful Bed management Console and Patient Console for a Hospital Management for a Hospital management system. Involved in both design and enhancement of "bed management console."
 - Customized the 'Radaptive' product based on clients requirements by adding a console functionality on the ticket management application.
 - Enhanced the ticket management application by adding an email notification functionality.
